

Ashley Andrikanich

Cybersecurity/AI Engineering Intern

205 Victoria Lane, Oxford, PA 19363 | (302)-559-6012 |
aandrikanich25@gmail.com | <https://ashleyandrikanich.vercel.app/>

PROFESSIONAL SUMMARY:

CompTIA Security+ certified Cybersecurity graduate, AI Engineering Intern, and Full-Stack Developer with practical experience engineering secure, data-driven applications. Proven capability in identity management and application security, demonstrated through enforcing multi-factor authentication, building automated CI/CD pipelines, and implementing lockout policies. Expertly combines an academic background in threat analysis with hands-on technical proficiency in Next.js, React, TypeScript, and AI model workflows to build secure digital solutions.

CERTIFICATIONS:

CompTIA Security+ (SY0-701) Earned November 2025

SKILLS:

SECURITY AND NETWORKING: Network Security, Risk Management, Threat Analysis, Incident Response, Wireshark, Social Engineering Tactics, Multi-Factor Authentication, Password Lockout Logic, CI/CD Pipelines, GitHub Actions

AI ENGINEERING: LLM Integration, Prompt Engineering, AI Data Parsing, Claude Code

PROGRAMMING LANGUAGES: Python, Java, PHP, SQL, HTML, JavaScript, TypeScript

LIBRARIES AND FRAMEWORKS: Next.js, React, Tailwind CSS, Prisma ORM

DATABASE MANAGEMENT: MySQL, phpMyAdmin, PostgreSQL

SYSTEMS/TOOLS: Unix/Linux, Windows, Git, GitHub, VS Code, Cursor, Vitest, ESLint, NanoClaw

SOFT SKILLS: Communication, Adaptability, Time Management, Continuous Learning, Teamwork, Problem Solving

EDUCATION:

BACHELOR'S DEGREE IN COMPUTER SCIENCE, CONCENTRATION IN CYBERSECURITY August 2021 – May 2025

MINOR IN CRIMINOLOGY

Indiana University of Pennsylvania, Indiana, Pennsylvania

GPA: 3.78 | Summa Cum Laude

EXPERIENCE:

CYBERSECURITY/AI ENGINEER INTERN January 2026 – May 2026

End of an Era

Security Infrastructure and Identity Management

- Enforced multi-factor authentication for administrative accounts to strengthen access control and mitigate unauthorized entry
- Developed and deployed a Password Lockout Policy to prevent brute-force attacks, incorporating a secure "Forgot Password" bypass to maintain user accessibility
- Engineered a Manual Account Unlock feature within the Admin Dashboard, providing administrators with control over user access states

AI Engineering and Secure Automation

- Built and optimized secure, containerized AI agent workflows to ensure isolated execution environments for automated tasks.
- Utilized artificial intelligence to streamline development, automate repetitive codebase migrations, and accelerate full-stack engineering cycles.
- Implemented LLM integration and secure data parsing workflows, applying prompt engineering principles to process unstructured user inputs safely

Full Stack Feature Development

- Architected the "Plan For Your Pets and Dependents" module, successfully refactoring the interface into distinct, multi-page workflows for improved data organization
- Enhanced data collection models by integrating specific fields into both the management modals and summary views
- Streamlined document management systems, implementing persistent status indicators, multi-file upload capabilities, and secure document preview/download functionality

UI/UX Standardization and Frontend Engineering

- Standardized global design elements across the application using React and Tailwind CSS, including typography hierarchies, unified button color palettes, and structured layouts
- Optimized application navigation by reframing the Account Access pages and implementing logic-based flow redirects to improve the end-to-end user journey.
- Synchronized complex frontend UI components with relational backend data structures during major application refactors

PROJECTS:	GLOWSYNC	May 2026 – Present
	Personal Project	
	• Architected and deployed a responsive web application utilizing Next.js, React, TypeScript, Tailwind CSS, and Prisma ORM to manage personalized skincare regimens. • Engineered an interactive skin assessment quiz that dynamically parses user data, such as skin type, sensitivity, and SPF habits, to generate tailored routine recommendations. • Developed a comprehensive routine tracker featuring AM/PM separation, active ingredient step-ordering, usage logging, and local data persistence. • Programmed automated routine analysis logic to cross-reference product formulations, automatically flagging potential active ingredient conflicts and pairing risks. • Built a secure application infrastructure featuring encrypted session cookies, strict password validation, rate limiting, same-origin verification, and protective security headers. • Implemented comprehensive unit testing suites via Vitest to validate quiz logic, routine parsing configurations, and core security utilities. • Designed and configured an automated CI/CD deployment pipeline using GitHub Actions to trigger on every push, streamlining build verification. • Integrated automated code quality and vulnerability mitigation checks into the pipeline, executing systematic TypeScript compilation, ESLint sweeps, and dependency safety audits before deployment.	

STATHUB

January 2025 – May 2025

Group Project

- Designed, structured, and managed a relational MySQL database featuring optimized schemas to support, index, and retrieve hundreds of player and team performance records.
- Developed a full-stack web application leveraging PHP and HTML, executing secure server-side logic and dynamic data rendering.
- Formulated integrated, complex SQL queries (including inner joins and aggregations) to handle live data binding and ensure seamless real-time statistics updates.
- Implemented interactive user interfaces to visualize key performance indicators across multiple sports leagues and teams, improving data legibility.
- Enforced input validation mechanisms on backend forms to mitigate database vulnerabilities and protect data integrity during multi-user operations

AUTOMATED LINE ART

October 2024 – December 2024

Group Project

- Programmed multi-axis robotic movement paths by developing Python scripts that parsed digital images, calculated pixel-density gradients, and dynamically converted them into precise G-code instructions for grayscale replication.
- Automated pixel-based motion control profiles by executing custom Unix shell commands and integrating low-level multi-axis control scripting to synchronize hardware acceleration with image processing data.
- Designed and prototyped a custom 3D-printed marker adapter using CAD software, optimizing the physical attachment for structural rigidity to achieve sub-millimeter drawing precision.
- Conducted systematic hardware testing iterations, calibration routines, and error-margin analyses to isolate and resolve mechanical backlash and improve line repeatability

AWARDS/HONORS:

- | | |
|--|-------------|
| • Trustee’s Scholarship Recipient | 2021 – 2025 |
| • Provost Scholar | 2024, 2025 |
| • Pennsylvania State Athletic Conference Scholar Athlete | 2022, 2023 |

EXTRACURRICULAR

- | | |
|--|-----------------------------|
| • Volunteer at Indiana County Humane Society | September 2024 – May 2025 |
| • Member of IUP Women’s Lacrosse Team | August 2021 – June 2023 |
| • American Sign Language Club Member | August 2021 – December 2021 |

ACTIVITIES:
